ABSTRACT OF THE DISCLOSURE

A system and method of foreign language training by making questions and sentences within a limited time are disclosed. Through the disclosed method, the learner at the user end can perform real-time foreign language sentence-making training. The disclosed system includes at least: a central message control module, a sentence-making setting control mode, a sentence-making input determination module, and a sentence pattern database. The disclosed method includes at least the steps of: using a sentence-making setting control module to complete practice settings through, using a sentence-making problem generating module to generate output practice sentences, using a sentence-making input determination to carry out a sentence-making practice process, and the learner completing the sentence-making practice process.
